indonesia from ethnic conflict to islamic terrorism situating islam in indonesia the matrix of class relations social transformation 1965 1998 konglomerat kelas bawah islam buildings on fire church burning riots and election violence 1995 1997 crisis conspiracy conflagration jakarta 1998 from lynchings to communal violence pogroms 1998 2001 jihad and religious violence in indonesia 1995 2005

designing the best call center for your business examines all key aspects of opening and expanding a live agent call center with in depth coverage on facilities and workstation design site selection including communications and power backups f

this volume presents multiple perspectives on the uses of the history of mathematics for teaching and learning including the value of historical topics in challenging mathematics tasks for provoking teachers reflection on the nature of mathematics curriculum development questions that mirror earlier pedagogical choices in the history of mathematics education and the history of technological innovations in the teaching and learning of mathematics an ethnomathematical perspective on the history of mathematics challenges readers to appreciate the role of mathematics in perpetuating consequences of colonialism histories of the textbook and its uses offer interesting insights into how technology has changed the fundamental role of curriculum materials and classroom pedagogies history is explored as a source for the training of teachers for good puzzles and problems and for a broad understanding of mathematics education policy third in a series of sourcebooks from the international commission for the study and improvement of mathematics teaching this collection of cutting edge research stories from the field and policy implications is a contemporary and global perspective on current possibilities for the history of mathematics for mathematics education this latest volume integrates discussions regarding history of mathematics history of mathematics education and history of technology for education that have taken place at the commission s recent annual conferences

powerful and economic sensors such as high definition cameras and corresponding recognition software have become readily available e g for face and motion recognition however designing user interfaces for robots phones and computers that facilitate a seamless intuitive and apparently effortless communication as between humans is still highly challenging this has shifted the focus from developing ever faster and higher resolution sensors to interpreting available sensor data for understanding social signals and

recognising users intentions psychologists ethnologists linguists and sociologists have investigated social behaviour in human human interaction but their findings are rarely applied in the human robot interaction domain instead robot designers tend to rely on either proof of concept or machine learning based methods in proving the concept developers effectively demonstrate that users are able to adapt to robots deployed in the public space typically an initial period of collecting human robot interaction data is used for identifying frequently occurring problems these are then addressed by adjusting the interaction policies on the basis of the collected data however the updated policies are strongly biased by the initial design of the robot and might not reflect natural spontaneous user behaviour in the machine learning approach learning algorithms are used for finding a mapping between the sensor data space and a hypothesised or estimated set of intentions however this brute force approach ignores the possibility that some signals or modalities are superfluous or even disruptive in intention recognition furthermore this method is very sensitive to peculiarities of the training data in sum both methods cannot reliably support natural interaction as they crucially depend on an accurate model of human intention recognition therefore approaches to social robotics from engineers and computer scientists urgently have to be informed by studies of intention recognition in natural human human communication combining the investigation of natural human behaviour and the design of computer and robot interfaces can significantly improve the usability of modern technology for example robots will be easier to use by a broad public if they can interpret the social signals that users spontaneously produce for conveying their intentions anyway by correctly identifying and even anticipating the user s intention the user will perceive that the system truly understands her his needs vice versa if a robot produces socially appropriate signals it will be easier for its users to understand the robot s intentions furthermore studying natural behaviour as a basis for controlling robots and other devices results in greater robustness responsiveness and approachability thus we welcome submissions that a investigate how relevant social signals can be identified in human behaviour b investigate the meaning of social signals in a specific

context or task c identify the minimal set of intentions for describing a context or task d demonstrate how insights from the analysis of social behaviour can improve a robot s capabilities or e demonstrate how a robot can make itself more understandable to the user by producing more human like social signals

revealing big tech s patriarchal deployment of media theory to gain and maintain power insufferable tools proposes a new feminist politics of tech that can forge futures free from the grip of the brologarchs of contemporary tech culture

current debates on intercultural communication often align with critical approaches however in the fields of cultural linguistics and intercultural pragmatics significant strides have been made towards a dynamic and sociocognitive framework for understanding intercultural communication drawing from these concepts this book proposes a fine grained analysis to elucidate the active co construction of intercultural space in situ encompassing verbal corporal gestural and prosodic dimensions this empirical contribution fills a notable gap in the burgeoning interface between cognition interaction and embodiment shedding light on a critical intercultural facet that has hitherto remained underexplored

this book explores the political and ideological motivations behind the formation of the nahdlatul ulama affiliated political party and abdurrahman wahid s rise to the presidency of indonesia after having led nu for 15 years away from formal politics it sheds light on the complex and historical rivalries within islam in indonesia and how those relationships inform and explain political alliances and manoeuvres in contemporary indonesia
